NOTE	 Ripple & noise are measure Tolerance : includes set up The power supply is consid a 360mm*360mm metal pla perform these EMC tests, p When the input vlotage is le deviation that does not affect 	meters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature. A noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. De : includes set up tolerance, line regulation and load regulation. Wer supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on m*360mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to these EMC tests, please refer to "EMI testing of component power supplies." (as available on http://www.meanwell.com) the input vlotage is less than 40VAC, the SPS may exhibit degradation of performance. The final product manufacturers must re-confirm this n that does not affect basic safety or essential performance.
